AUTHOR	Ahmed, Naim; And Others
TITLE	Children and Their Families; A Statistical Profile.
INSTITUTION	South Carolina State Dept. of Social Services, Columbia.
PUB DATE	Sep 77
NOTE	208p.; Best copy available
EDRS PRICE	MF01/PC09 Plus Postage.
DESCRIPTORS	Birth Rate; Data Bases; *Demography; Economic Climate; Economic Disadvantagement; *Economic Factors; *Family Characteristics; *Health; Infant Mortality; *Social Services; State Surveys
IDENTIFIERS	Early Periodic Screening Diagnosis Testing; *South Carolina

ABSTRACT

The purpose of this book is to provide a uniform and current (1977) data base for persons involved in planning and administering human services programs in South Carolina. General statewide demographic data are given first in a brief introduction. Then, each of the state's counties is profiled in terms of general demographic characteristics, economic characteristics, family characteristics, health statistics, and the availability and use of services. Categories of the data include licensed day care facilities, kindergarten enrollment, child abuse, foster care, adoption, birth rate, premature births, prenatal care, immunization and infant mortality rate. County by county data are summed to give a statewide picture. References used in compiling the book are cited. (Author/RH)

Dear Colleague:

To assist administrators and staff in accomplishing more efficiently their tasks, information is delivered through "intelligent" computer terminals, machines designed for specific purposes in both private and public sectors. Needless to say, such 21st century innovations have not yet reached human service program organizations and providers. We had to think of a method to provide you with vital statistics in a more conventional manner.

The answer is this book - chock-full with information you always wanted and which will be up-dated on a continuous basis as better data become available to us.

We expect that the information contained in this publication will help you in your work, and that you will be able to take full advantage of the statistical data.

Sincerely,

Betty V. Carnes

Betty V. Carnes, Director
Office of Child Development

OF CONTINUOUS USEFULNESS . . .

The planning and administration of human service programs has become an undertaking with ever-broadening implications and possibilities. Decisions and dollars now flow across organizational boundaries at the community as well as local, state and federal levels. Administrators continue coping with lack of a definitive knowledge base. Whenever human service programs are in operation or being planned, data pertaining to demographic, economic, social, and health characteristics are usually included as key elements. It is virtually impossible for an administrator to function without reliable sources of data. What is needed for the effective and efficient operation of any modern organization is a data bank, or a tool that can fulfill the need in absence of sophisticated technology.

The Office of Child Development realized the need for an information center capable of providing continuously up-dated and reliable data. In compiling this book, OCD feels it is making a positive contribution toward this goal. However, it was not our intention to include in this book an answer to every question, every problem pertaining to data confronting administrators, managers and their staff. But, it was our intention to include those areas of concern with which all managers and providers of child development programs in South Carolina can expect to deal regardless of their functional background, their mission and purpose, or the size of their institution.

ACKNOWLEDGEMENTS

We would like to acknowledge the cooperation of the Department of Health and Environmental Control, Mr. Murry Hudson from the Division of Biostatistics and Mr. John Jones from the Division of Immunization and Prevention.

Our special thanks to Mrs. Nancy Schmidt, our tireless secretary, who was responsible for all typing and type-setting.

INTRODUCTION

The focus of each user of this book is obviously different. Legislatures and governing bodies require more summarization focusing on public priorities and objectives. Agencies need more detailed information for program implementation and greater efficiency regardless of specific information needs. Two key questions come into focus:

1. Are the current activities efficient and effective?
2. Should current activities be eliminated or reduced and replaced by new, higher-priority programs?

Before management can make such vital decisions, it must review programs and processes. This book provides the "tools" necessary to review and evaluate programs in an objective manner. Five important areas of continuous concern are covered in this package. The introduction and content of the book will provide the user with the information he needs for evaluation in the decision-making process. This information includes:

*General Demographic Characteristics
*Economic Characteristics
*Family Characteristics
*Health Statistics
    General
    Births
    Deaths
*Available Services

Each manager/user now has accurate data at his fingertips. The strategy of implementing must be developed by each organization, depending on its specific needs. One thing is certain: regardless of how many different elements address themselves to a given problem or need, with the help of this book, they can be sure of a uniform and identical data base on which to build their case.

General Demographic:

South Carolina is a growing state, a phenomenon common to most states located in the so-called "sun belt." Between 1970 and 1975, for instance, the state population has increased by almost 8.8 percent. The distributional pattern of this growth, however, has been uneven. It has ranged from an increase of 37 percent in Dorchester County to a decrease of 5 percent in Lee County. Ten counties have grown by over 10 percent of the state population. The largest concentration of non-whites is in Williamsburg County (65%). Pickens County has the least number of non-whites in terms of its population (5%).

A commonly used criteria of economic well-being is the state's per capita income. In 1974, South Carolina had a per capita income of $4,311. This compares to the U.S. average of $5,486, relegating South Carolina to the rank of ninth among the twelve Southeastern states. [1]The per capita income figures in South Carolina appear to be inversely correlated with the ratio of non-white to total population in each county. It is important, however, to bear in mind the shortcomings of per capita personal income as an indicator. This indicator ignores the deviations from the mean, and therefore, the existence of wide income inequalities would make the per capita income figures meaningless. A case in point is Beaufort County. Although it has the highest per capita income in the state, it still contains large pockets of poverty.

The general demographic data, nevertheless, do provide a valuable background against which all data for each county can be analyzed.

---

[1] Ranking of Southeastern States (U.S. Dept. of Commerce, Bureau of Economic Analysis *Survey of Current Business)*. 1) Florida, 2) Virginia, 3) Georgia, 4) North Carolina, 5) Tennessee, 6) Kentucky, 7) West Virginia, 8) Louisiana, 9) South Carolina, 10) Arkansas, 11) Alabama, 12) Mississippi.

Economic:

Poverty creates a unique group of people, a group that is by far and large, most vulnerable to the economic, impersonal vicissitudes of our industrial free enterprise system. By all available indicators, the quality of family life is directly related to income at the lowest levels. The reason for this fact is that those in the lowest levels, unable to meet all their basic needs, must select some necessities for consumption at the expense of others.

The inherent liabilities of poverty clearly amount to "stacking the deck" against a child as he grows and develops. Without appropriate, timely intervention, the child may never be given an opportunity to realize his full potential and thus becomes another negative statistic in the costly, never-ending cycle of poverty.

The social stresses of the seventies have created a new phenomenon in our society never before experienced in such size and scope. The percentage of female-headed families and families with working mothers has accelerated to all time highs with no signs of abating.

Although women have made gains toward equality with men in education, labor force participation, and in some occupational fields, differences between the income of women and men workers remain substantial. U.S. figures show that in 1974 the median income of women was about 57 percent of the median for men in comparable positions. In fact, women college graduates had incomes that were, on the average, lower than those of men with only a high school education.

The median income of families headed by women is much lower than that of husband-wife families or other families headed by men. In 1974, families with female heads had a median income which equaled about 47 percent of the median for male-headed families. In spite of this, the number of families with female heads has grown substantially over the past quarter century.

The number of female-headed families in poverty has actually increased between 1970 and 1974. This growth has occurred exclusively among families with children under 18 years of age. In 1974, the majority of children in poverty were in families headed by women.

Thus, the demography of poverty is increasingly being characterized by the predominance of females - a change having serious implications for South Carolina with its relatively low per capita income.

Family Characteristics:

In American society, the family bears the major responsibility for the care and rearing of children. What was once a pioneer society of strong, closely-knit extended families has turned into a series of fragmented units, with little contact or interchange between the generations.

The family change affecting the largest number of South Carolina's children has been the increase in female-headed households. (83,014 female-headed households - 1970 Census). The number of intact families with children has been declining steadily in recent decades. The rapid increase in the number of femaleheaded families in South Carolina is due to the increasing prevalence of marital separation, divorce, and the larger proportion of out-ofwedlock births. Children of non-white families are more likely to be living in single-parent households. 2.5% of the families with female heads contain children less than the age of six. Children living with their mothers only are also likely to be living in poverty. In South Carolina, 39,585 families with female heads had incomes less than the poverty level (1970 Census). Further, the increasing prevalence of female-headed families and the low income status associated with such families as well as constantly changing eligibility regulations has substantially increased the number of children eligible for public assistance.

Furthermore, it is an established fact that the low socioeconomic-level mother is likely to have poor nutrition and inadequate pre-natal care because of poverty. This fact reduces the chances of a healthy and productive life-span for children born into poverty.

A significant number of people live in areas that can be classified as "medically underserved," in that the services of physicians and other health professionals are not available in proportion to need. We find that in South Carolina, rural people in the more sparsely populated areas have only very marginal access to physicians, nurses, dentists, hospital beds, and other health resources, when compared with the rest of the nation.

Health Statistics:

Health problems are further compounded by an aging population (7.4% are 65 years of age or over - 1970 Census), and a high degree of poverty (24% with incomes less than poverty level 1970 Census). In South Carolina one person out of four in rural districts is poor; in the cities one out of six.

In order to answer the need for up-to-date comprehensive health data, the scope of coverage in our report is as complete as possible in the areas of pre-natal care, child care, EPSDT, and immunization. Each of these areas is significant as an indication of the quality of life enjoyed by our population. An examination of one area, immunization levels, for example, reveals important information about the health of South Carolina's children.

Immunization levels among children have been decreasing at an alarming rate in the United States in the past few years. National surveys indicate that approximately 5.8 million of the nearly 14 million 1-4 year olds are unprotected against polio, mumps, measles, rubella, diphtheria, pertussis or tetanus.

The major problem confronting South Carolina in regard to the childhood diseases is the number of susceptibles in the population that remain at risk of contracting communicable diseases. The Department of Health and Environmental Control has been monitoring the immunity levels in the state. For example, a recently completed survey among the two year olds indicates that South Carolina is doing better than the national average.

	Percent of 2 Year Olds Immunized S.C. 1976	U.S. 1976
3 DPT	85.1	75.2
3 Polio	80.6	64.8
1 Measles	72.5	67.7
1 Rubella	72.4	67.5
1 Mumps	69.0	

Another survey conducted by the Department of Health and Environmental Control indicates that public day care facilities are not likely to become foci for the spread of vaccine preventable disease. The children attending the public day care facilities are better protected than any other group surveyed to date.

Immunization Status	Percent Immunized Private Day Care (Jan. - Mar. 75)	Public Day Care (Jan. - Mar. 76)
3 DPT	89.0	92.7
3 Polio	83.5	91.2
1 Measles	80.7	92.2
1 Rubella	79.0	92.2
1 Mumps	59.0	62.3
Series Complete	72.0	86.0

Closing:

This report is not an experimental approach. We talk with great conviction about what we want for our children. Of course, there are many reports about what public and private organizations do, what they plan, produce, claim and how they spend allocated monies. We in South Carolina are concerned with measurable results: family arrangements, income distribution, results of child upbringing, results of services rendered which should help to prepare our children to live more productive lives.

However, accountability demands that we ask whether investments in our children show the intended effects. Are we achieving our goals? Do health services keep children healthy? Are we able to protect children and their immediate families from harm? Are we doing better or worse today for example, than we were two years ago?

The data assembled on a county by county basis come from multiple sources, which are reflected in the References. To provide you, the user, with new and better data is a continuous effort. We feel that we have accomplished one of our goals: to provide very usable information organized in a manner which will help you perform your tasks more efficiently and accurately.
